

From Data to Deals

Let us make your G&G data work for you

With our comprehensive services for promoting and marketing geological and geophysical data via bespoke and secure EzDataRoom® platforms we can increase your chances of a successful asset divestment.

Who we are

We are a group of IT, marketing and geotechnical specialists, with 30+ years of experience in the oil and gas industry, who develop bespoke, tailor-made solutions for geotechnical data storage and showcasing.

Thanks to our business network of 3,000 decision makers from 1,500 oil companies worldwide we can promote and help you monetise your assets – we are proud to say we've already done that for over 250 companies.

how do we do it?

What do we do?

We help companies and governments build and manage their portfolios of oil and gas exploration and production assets, optimise capital expenditure, reduce operational risks and costs, search for business partners and deal with the challenges of digital transformation. We do that by providing specialist tools and services in secure online showcasing of geological and geophysical (G&G) data alongside project marketing and divestment services.

What can we do for you?

We can collect, organise and prepare your project data for showcasing by establishing a dedicated virtual or physical EzDataRoom platform, where you can share access to your data with authorised third parties, such as partners, bidders and investors. We offer state-of-the-art protected viewing tools available within our bespoke and revolutionary GeoReality™ solution (patent applied for). Utilising our HydrocarbonAssets™ service portfolio we can promote your project to the widest possible audience and provide complex support to national oil companies and governments during licencing rounds.

What can we help you with?

- Licencing Rounds
- Farm-ins/farm-outs
- Divestments
- G&G data management
- Data Sales

Who do we support?

We support governments, national oil companies, listed and private oil companies (from super majors to independents), geoscience and seismic companies, brokers and investment banks in asset divestment and acquisitions, farm-in and farm-out deals, data sales and licencing rounds. We support projects at all stages of upstream operations: exploration, appraisal, development and production. Please contact us for more details.

With our services we contribute to your growth and success. Trust us with your data.

Why us?

Size doesn't matter. We will offer you best quality services no matter if your project is worth billions of dollars or is just a matter of your commitment.

Your success is our priority.

- Over 800 farm-outs worldwide with success rate exceeding 40%* (*data provided by JSI Services Ltd.)
- Experience in licencing rounds on 5 continents (Africa, Asia, Europe, North America, South America)
- Over 250 satisfied clients
- Business network of 3,000 decision makers from 1,500 companies worldwide

Creativity

We understand geotechnical data, so we can collect, organise and prepare your data for showcasing in our bespoke virtual or physical EzDataRoom. Our extensive experience allows us to find creative solutions for your project marketing and for the whole process of farm-ins, farm-outs, divestment or licencing rounds. Our services are based on our own innovations and software.

Secure Data Hosting

Secure handling of geotechnical data is difficult. We keep your data safe but make access to it easy. We bring large, complex and valuable technical data to full use through an easy and efficient medium, EzDataRoom, while safeguarding the data from unauthorised copying and plagiarising.

Project privacy

Within our showcasing, marketing and divestment services we handle your project strictly according to your requirements. If you want to keep your project private or access to your data is restricted by law we carefully choose appropriate solutions to keep your project safe but still attract an interest from potential investors.

Compliance

As we operate around the world our products and services are individually adjusted to different legal environments so that they are offered in full compliance with the law. We are able to fully meet tight legal obligations regarding data storage, security methods, and provide a level playing field for all project bidders.

Innovation

We are technologically innovative and bring unique and powerful features which invariably address the needs of our customers and users. From the early days of our pioneering geotechnical online data rooms to today's modern web-based 3D prospect models with Virtual and Augmented Reality, we furnish the best solutions that fulfil the objectives of our clients.
